

Task 26 – Doc – Spike Extension Report

“Write a report to describe the overall alignment of your Credit work extensions with the Intended Learning Outcomes for the unit. Your report will not need to be long as it is a summary and overview of the work you should have already documented in your extension documents.”

If you have done some of the optional extension spike work, either something that was set as a task or something else that you want to include that isn't part of your custom project, we want you to provide us with more details about how the work aligns with the ILO's so that you can receive recognition for the work in your final portfolio.

So, the primary job of the report is to tell us how each part of your spike extensions aligns with the ILO's. We strongly suggest using a table for this presentation of the alignment, but the exact format is up to you.

Note: Your individual spike extension reports (submitted to Canvas) already tell us the details of what you did, so no need to repeat details that are already in your spike reports! Focus on the alignment.

There is no page limit for your report – write what you need to get the job done. However, as a guide most reports are 2-5 pages in length, depending on the number of spikes extension to report on.

Suggested Report Structure:

Spike Extension Report

Your name and ID

COS30031 – Games Programming

Introduction

Explain the purpose of the report ... just a good general habit for report writing.

ILO's

For your own reference in the report, it might be worth re-stating the unit ILO's so that you can then refer to them in later sections. Not required but does make it easier to justify your task alignment and refer to them.

Spike Extension Alignment:

Include a list or table of the extensions, and indicate which ILO's the work align with. If possible, see if you can indicate how much they support the ILO's. Here is a basic example:

Spike Extension	ILO 1	ILO 2	ILO 3	ILO 4
Spike 04 – Gridworld Multithread	X	X	X	
Spike 14 – Configuration Files	X	X		X
Quick Spike Demo				
etc				

Justification for Each Extension:

For each extension task, take a moment to describe what it is in each extension that aligns with the ILO. Essentially, this is the data that supports your points in the list or table presented in the previous section.

Conclusion

Repeat the key outcomes presented in the report. Make sure it aligns with the stated purpose in the introduction.
